How secure industrial inventory vending works for you

1 User logs in

Authorised user logs into the system and selects required item and quantity.

2 Item dispensed

The drum rotates to the correct location and the user is directed to the correct compartment using high brightness LED's.

3 Automatically relocked

User opens the indicated location, obtains required items and closes the cover which is automatically relocked.

Industrial vending with enterprise level security and extensive features

A scalable and cost-effective solution for the secure management of a wide range of high and low usage items such as PPE and MRO consumables.

Low to high volume

iVend Secure is available in 6 variations providing between 36 and 936 secure compartments in a single unit.

Secure returns capability

iVend Secure has an easy and secure returns capability, controlling access to a single compartment.

Security

The compartments in iVend Secure are hidden from view behind sturdy sliding doors and can withstand vigorous operation.

Configurable

Each drum can be configured to provide columns of two different widths.

Efficiency

Multiple compartments can be selected in a single transaction minimising the time required to manage large volumes of stock.

Traceability

Sourcerer software provides a complete audit trail allowing the company to know who, when, where and why about the usage of any item within the systems.
